

Security Combo Lock with 6' Cable

Quick Start Guide

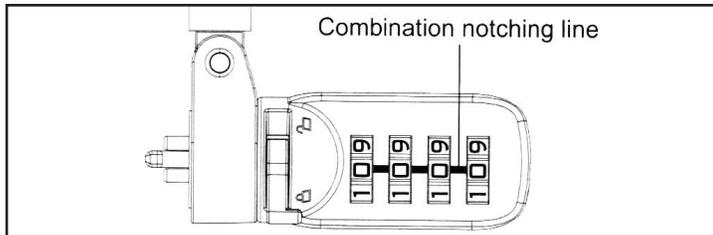

Package Contents

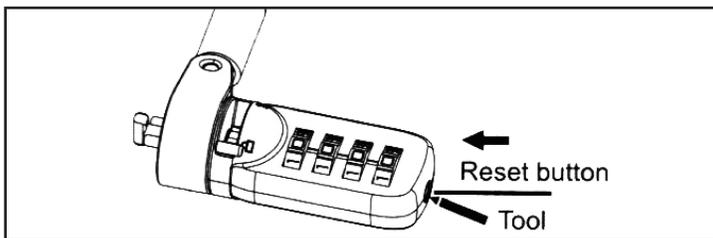

1. Security Combo Lock with 6' Cable (and velcro wrap)
2. Optional Spacer Pads

Step 1 - By default the combination will be set to 0-0-0-0. To set a unique combination, align all zeroes with the combination notching line (shown below). The lock lever (to the left of the numbers) can be in either the open or closed position.

Step 2 - Using a small screwdriver or similar tool, press and hold in the reset button (shown below).

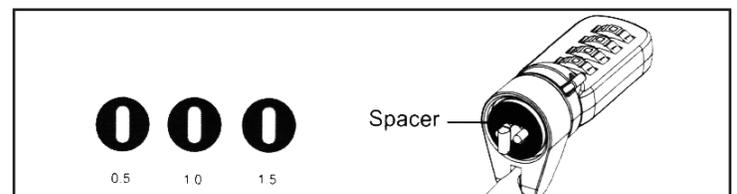

Step 3 - While holding in the reset button, set a new four digit combination, making sure to align the numbers with the combination notching line as you did in Step 1.

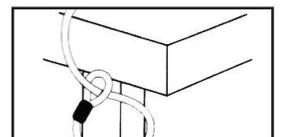

Step 4 - Release the reset button to complete the process. Write down and safely store the combination if needed. To reset the lock combination again later, repeat Steps 1-4, making sure to replace the 0-0-0-0 in Step 1 with the current combination.

Before securing the lock to a NewerTech Security Adapter bracket or other device with a Kensington Security Slot, you can apply one of the optional spacer pads to the end of the lock (see Step 5 below).

Step 5 - Try the three included pads to find the best fit, seating it between the lock mechanism and the Kensington Security Slot. Each spacer has a different thickness – 0.5, 1.0, and 1.5mm.

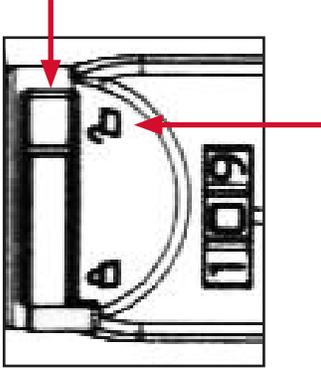

Step 6 - Using a table leg or other sturdy, affixed object, wrap the looped end of the cable around the leg and run the lock through the loop (right).

See Reverse

Step 7 - To secure your device, set the lock combination that you chose in Step 3 then set the lock lever to the open position (shown below).

Step 8 - To set the lock, insert it into the device's Kensington Security Slot, then set the lever to the closed position. Next, change the combination to a random number. The lock should now be secured to the device. Test the lock lever. If it will not slide to the open position, it is securely locked.

Step 9 - To unlock the device, move the digits to your chosen combination, then move the lock lever to the open position and remove the lock from the Kensington Security Slot.
