INTRODUCTION

1.1 MINIMUM SYSTEM REQUIREMENTS

1.1.1 Mac® Requirements

- PowerPC G4 CPU, 128MB RAM
- FireWire: Mac OS X 10.2 or later
- USB 2.0: Mac OS X 10.2 or later

1.1.2 PC Requirements

- 500MHz Intel Pentium 3 CPU, 128MB RAM
- FireWire: Windows 2000/XP or later
- USB 2.0: Windows 2000/XP or later

1.1.3 Supported Hard Drives

- Any 3.5" SATA hard drive

1.2 PACKAGE CONTENTS

Mercury Elite Pro
(with vertical stand)

Power supply and
power cable

USB 2.0
(A to Standard-B) cable

FireWire 400
(1394a) cable

1.3 ABOUT THIS MANUAL

Firmware, images, and descriptions may vary slightly between this manual and the unit shipped. Functions and features may change depending on the firmware version. Please visit the product webpage for the most recent specifications.

1.4 REAR VIEW

1.4.1 Connection

1. Plug the power supply into a power outlet and into the OWC Mercury Elite Pro.
2. Connect the FireWire 400 or USB 2.0 cable—appropriate for the interface that your computer supports—into the drive and computer.

NOTE:

- Only one interface (FireWire 400 or USB 2.0) at a time can be used.
- For the safe removal of your drive and to assure that no data is lost, always unmount the drive from your operating system before powering off.
- In order for the computer to access volumes larger than 2TB, the operating system needs to support large volumes (e.g., Windows Vista or Mac OS X 10.4 and above).

1.5 LED INDICATOR

The OWC Mercury Elite Pro has a blue LED at the front of the enclosure. The LED emits a solid blue light when the unit is powered on, and it flashes during hard drive activity.

1.6 PRECONFIGURED

To help get things up and running quickly, the hard drive in your OWC Mercury Elite Pro has already been formatted. For formatting information, including how to format your OWC Mercury Elite Pro for Mac or Windows, go to: <http://www.macsales.com/format>

APPENDIX

2.1 LARGE VOLUME SUPPORT AND FIREWIRE BOOTING IN MAC OS

As your OWC Mercury Elite Pro is preconfigured and shipped, a setting known as “large volume support” has been enabled in the enclosure. Enabling large volume support allows the Mercury Elite Pro enclosure to utilize the full capacity of hard drives larger than 2TB.

When large volume support is enabled, PowerPC Macs and Intel Macs introduced before 2008 will not be able to boot to the OWC Mercury Elite Pro over the FireWire connection. This is a limitation of these computers. Mac models introduced in 2008 and later are fully capable of using the OWC Mercury Elite Pro as a boot drive over FireWire, even with large volume support enabled. Note that this only affects FireWire booting. All Intel Macs are still able to boot to the OWC Mercury Elite Pro over USB, regardless of large volume support.

If your OWC Mercury Elite Pro contains a drive smaller than 2TB in capacity and you wish to use it as a FireWire boot drive for a pre-2008 Mac, please contact OWC technical support for assistance with disabling large volume support (see **Section 2.7, Technical Support Hours and Contact Information**).

2.2 FORMATTING

For formatting information, including instructions on how to format your OWC Mercury Elite Pro for Mac or Windows, go to: <http://www.macsales.com/format>

2.3 UNMOUNTING DRIVES

To properly unmount any connected drives from your computer, you need to follow a few simple steps.

For Mac OS X systems:

There are two main methods to unmount disks with Mac OS X systems. Either drag the icon for the disk you wish to unmount to the trash can, or right-click the disk icon on the desktop, then click “Eject”.

For Windows systems:

1. Go to the System Tray (located in the lower right corner of your screen). Click on the “Eject” icon (a small green arrow over a hardware image).
2. A message will appear, detailing the devices that the “Eject” icon controls, i.e., “Safely remove...” Click on this prompt.
3. You will then see a message that says, “Safe to Remove Hardware.” It is now safe to disconnect the OWC Mercury Elite Pro from the computer.

2.4 TROUBLESHOOTING

Begin your troubleshooting by verifying that the power cable is connected to the OWC Mercury Elite Pro and to a power source. If the power cable is connected to a power strip, make sure that the power switch on the strip is turned on.

Then, simply verify that both ends of your cables are properly plugged into the computer and the Mercury Elite Pro. If the Mercury Elite Pro is still not working properly, try connecting to another interface such as the USB connection and see if the device works properly. You can also connect the Mercury Elite Pro to a different computer.

If problems persist, consult our online collection of frequently asked questions (<http://www.macsales.com/FAQ>) or see section 3.7 for information on contacting OWC technical support.

2.5 ABOUT DATA BACKUP

To ensure that your files are protected and to prevent data loss, we strongly suggest that you keep two copies of your data: one copy on your OWC Mercury Elite Pro and a second copy on either your internal drive or another storage medium, such as an optical backup, or on a second external storage unit. Any data loss or corruption while using the OWC Mercury Elite Pro is the sole responsibility of the user, and under no circumstances will Other World Computing be held liable for compensation or the recovery of any lost data.

2.6 ONLINE RESOURCES

Formatting:

For formatting information, including instructions on how to format your OWC Mercury Elite Pro for Mac or Windows, go to: <http://www.macsales.com/format>

Data Migration:

FCC Statement:

Warning! Modifications not authorized by the manufacturer may void the user's authority to operate this device.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference with radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.

Health And Safety Precautions:

- Use proper anti-static precautions while performing the installation of your hard drives into this drive enclosure. Failure to do so can cause damage to your drive mechanisms and/or the hard drive enclosure.
- Read this user guide carefully and follow the correct procedures when setting up the device.
- Do not attempt to disassemble or modify the device. To avoid any risk of electrical shock, fire, short-circuiting or dangerous emissions, never insert any metallic object into the device. If it appears to be malfunctioning, contact Other World Computing technical support.
- Never expose your device to rain, or use it near water or in damp or wet conditions. Never place objects containing liquids on the drive, as they may spill into its openings. Doing so increases the risk of electrical shock, short-circuiting, fire or personal injury.

General Use Precautions:

- To avoid damage, do not expose the device to temperatures outside the range of 5° C to 40° C (41° F to 104° F).
- Always unplug the device from the electrical outlet if there is a risk of lightning or if it will be unused for an extended period of time. Otherwise, there is an increased risk of electrical shock, short-circuiting or fire.
- Do not use the device near other electrical appliances such as televisions, radios or speakers. Doing so may cause interference which will adversely affect the operation of the other products.
- Do not place the device near sources of magnetic interference, such as computer displays, televisions or speakers. Magnetic interference can affect the operation and stability of hard drives.
- Do not place heavy objects on top of the device.
- Protect your device from excessive exposure to dust during use or storage. Dust can build up inside the device, increasing the risk of damage or malfunction.
- Do not block any ventilation openings on the device. These help to keep the device cool during operation. Blocking the ventilation openings may cause damage to the device and cause an increased risk of short-circuiting or fire.
